Ex. No. 1	Design A Website Using HTML5
Date of Exercise	
GitHub Host Link	

Aim

To design and develop a simple yet structured HTML5-based website using various essential tags and features that demonstrate a clear understanding of semantic elements and formatting techniques.

Description

This exercise involves creating a basic website consisting of a single web page structured using HTML5.Students are expected to showcase proper usage of fundamental HTML tags and implement different types of content, including headings, images, tables, lists, hyperlinks, and comments. The webpage should visually represent the application theme (e.g., tourism, food delivery, hospital, personal blog) of the student, while effectively applying background and text colors for good design aesthetics.

Procedure:

1. Create an HTML file named index.html.
2. Write the HTML code using the required tags and elements.
3. Save the file.
4. Open the file in a web browser.
5. Verify the webpage output.

Program

```
<!DOCTYPE html>

<html>

<head>

   <title>Happy Kids Online Toy Store</title>

</head>

<body bgcolor="#FFF8DC">
